

Ryan Rostampour

Windsor, Ontario, Canada | rostampourr@hotmail.com | (647) 467-0842 | github.com/RyanRostampour | linkedin.com/in/ryan-rostampour

TECHNICAL SKILLS

Languages: Python, Java, C, HTML, CSS, SQL, JavaScript
Frameworks & Tools: Flask, React, React Native, Vue.js, Bootstrap, Git, Linux, PyTorch, scikit-learn, Sentence-BERT, Transformers, Android SDK
Cloud Platforms: Google Cloud Platform (GCP), Microsoft Azure
Operating Systems: Windows, Linux, macOS

EDUCATION

Master of Science, Computer Science September 2025 – Present
University of Windsor — Windsor, ON | GPA: 95%
Bachelor of Computer Science (Honors) January 2020 – December 2024
University of Windsor — Windsor, ON | GPA: 80%

EXPERIENCE

Graduate Assistant September 2025 – Present
University of Windsor — Windsor, ON

- Evaluated and graded assignments, projects, and final exams for COMP-2120 (Object-Oriented Programming in Java) across 120 students and COMP-4200 (Mobile Application Development) across 80 students.
- Provided detailed written feedback on Java and Android Development coursework, supporting student comprehension of OOP principles and mobile UI patterns.
- Maintained consistent grading standards across 200+ students, ensuring fair and accurate academic assessment.

PROJECTS

Detecting Sleeper Agents in LLMs via Semantic Drift Analysis 2024
Python, PyTorch, Sentence-BERT, Transformers

- Built a dual-method detection system combining semantic drift analysis and canary baseline monitoring to identify backdoored LLMs in real time.
- Achieved 92.5% accuracy, 100% precision, and 85% recall with 17.3 σ statistical separation between safe and compromised model responses.
- Validated system against Cadenza-Labs' dolphin-llama3-8B sleeper agent model with sub-second detection time per sample and zero false positives.

Prime Number Classification: BDD, Decision Tree, and Neural Network 2024
Python, scikit-learn, Binary Decision Diagrams, MLP

- Compared three ML approaches (BDD, Decision Tree, Neural Network) for prime classification across 16–24-bit integers using 10-fold cross-validation.
- Achieved 92–95% accuracy with a neural network; demonstrated BDD is 20x smaller than the NN with minimal accuracy trade-off.
- Engineered domain-specific prime features, yielding a +20% accuracy improvement over generic bit-pattern features across all models.

Portfolio Website 2024
React, Vue.js

- Built personal portfolio using React and Vue.js, improving loading times by 30% and reducing bounce rates by 15%.
- Developed a functional contact page and GitHub project redirects, increasing inquiries by 25% and repository views by 40%.

RELEVANT COURSEWORK

Systems Programming (2023): Developed low-level C/Unix applications with multi-threading; built a file system simulation reducing memory usage by 25%.

Introduction to Software Engineering (2023): Led Agile team project building a task management web app; integrated RESTful APIs; reduced bugs 20% through code reviews.

Data Structures and Algorithms (2023): Implemented linked lists, hash maps, and graphs; developed graph-based pathfinding algorithm reducing computation time by 35%.

Object-Oriented Programming in Java (2023): Built parking lot management system using Factory, Singleton, and Observer design patterns; improved space optimization by 30%.

Database Management (2022): Designed normalized relational databases; wrote advanced SQL queries and stored procedures; led customer management system project.
